Enter the customer e-mail address during the sale and within seconds they receive an email with the receipt/invoice as a PDF attachment.

APP AVAILABLE
for iOS and Android

Use your smartphone as point of sale with the MOBILE POS LITE-APP.

CLARITY & SUCCESS
SOFTWARE for JEWELLERS

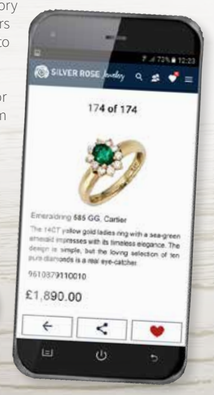
APPS FOR JEWELLERS

MOBILE POS LITE-APP
Your mobile point of sale

Jewellers can use the app to sell, scan labels and print receipts, send receipts by email, sign the display for data protection declarations or open the cash drawer. In addition, the MOBILE POS LITE-APP is the perfect sales aid by adding customer requests for price, brand or material which can be filtered with just a few clicks. The results are displayed in a picture gallery on the screen and the customer can then create a personal wish list. It is also possible to create new customers or view the sales history of existing customers.

With the MOBILE POS LITE-APP, selling and advising will be faster and better. The app can be easily integrated into the existing merchandise management system by communicating with the main computer via Wi-Fi or via the Internet. All data transfers automatically in the inventory management. MOBILE POS LITE-APP offers flexibility and quick checkout in the store next to the stationary POS system.

The MOBILE POS LITE-APP is suitable for Android, iOS Smartphones and tablets from versions iOS 13 or Android 10.0.



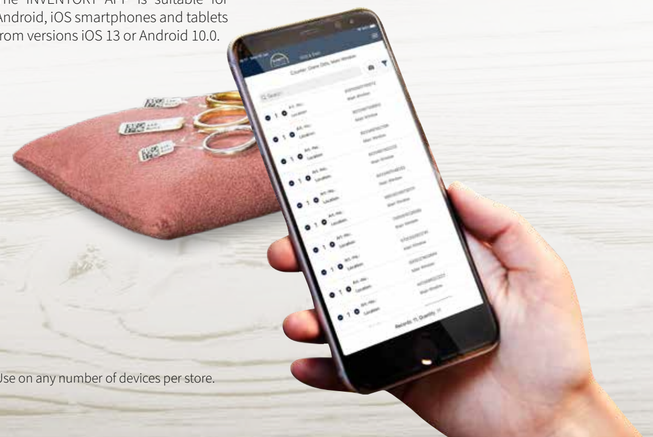
Use on any number of devices per store.

INVENTORY-APP
Stocktaking made easy

The inventory is like the tax return: It's not much fun, but has to be done once in the year. With the INVENTORY-APP from Clarity & Success time consuming counting is now much easier. Because the app transforms smartphones or tablets into fully functional inventory scanners.

All employees can thus actively participate in the inventory and use the camera of the mobile device to scan the jewellery and watch labels. All recorded data flows automatically into the Clarity & Success Jewellery management software. Staff can see the age of the article while scanning and see the article immediately.

The INVENTORY APP is suitable for Android, iOS smartphones and tablets from versions iOS 13 or Android 10.0.



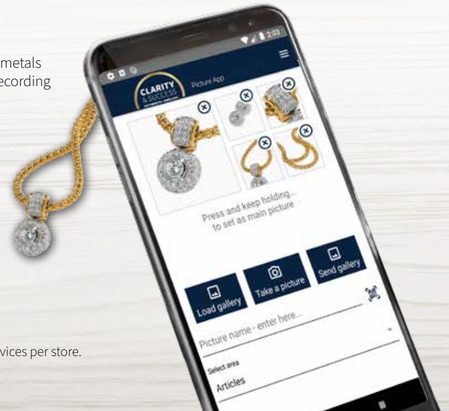
Use on any number of devices per store.

PICTURE-APP Photograph easily with your mobile phone

Jewellers, goldsmiths and watchmakers can now use the PICTURE-APP. Capture multiple images quickly and easily with your smartphone / tablet or transfer what has already been photographed from the picture gallery directly into the inventory management. If you have multiple images for a product, you can always choose one to set picture as the main picture.

The Clarity & Success support team set up a web service for this for the smooth transfer of images from the smartphone / tablet to your computer. You can assign a QR code on the Jeweller Management screen to the picture or pictures of the article. Scan the software or type in the article number on the mobile device. For the following areas in Clarity & Success merchandise management you can take pictures with the PICTURE-APP:

- Items
- Customers
- Repairs
- Purchase of precious metals
- Shop window value recording
- Certificates
- Vouchers
- Suppliers



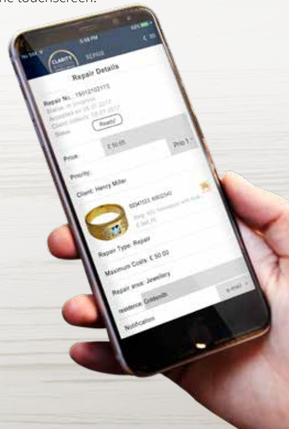
Use on any number of devices per store.

REPAIR-APP
Quick and effective

Jewellers can use the app to record repairs including pictures, print receipts for the repair (order form and collection form) as well as search the status of already entered repairs based on a search for customer data or repair numbers. While a new repair is being created there is the possibility of registering a new customer and directing repairs to them which directly saves into the database of the Jeweller management software and allows the new customer to sign the data protection declaration.

In order to make the documentation of the repair as precise as possible, several pictures can be taken with the integrated camera of the device and saved to the repair data. As soon as a new repair has been created, the customers can directly sign the repair order with their finger on the touchscreen.

The REPAIR APP can be easily connected to the existing ERP system of Clarity & Success by using the Wi-Fi or the Internet. The connection between the end device and the web service, which is installed on a local PC in the respective business by the encryption of the WiFi and the given security of the LAN network connection is protected.



Use on any number of devices per store.

TIME FOR DIAMONDS recommend Clarity & Success Evolution software

Time for Diamonds was established in 2005 in the popular market town of Bawtry, Doncaster, South Yorkshire. They strive to achieve uncompromising quality through a timeless sense of luxury, refinement and elegance. It enjoys a revered reputation for its high-quality service and enviable selection of jewellery, watches and gifts. The team is proud to work with some of the leading watch brands and offers individual consultations on finding the perfect watch or piece of jewellery. In 2019, Mark and Katie Burgin decided to search for a stock management software to modernise the business management and initially, on recommendation from the Industry, chose the Bransom system.

Mark and Katie explain: "We initially had the Bransom system installed but, in the early stages of training, Clarity & Success purchased Bransom. There were functions within Bransom that we found very frustrating so, after looking at C&S, we decided to move across. We found C&S far more advanced than the Bransom software. It could be really tailored to suit our business, with functions being added or removed as we required. C&S Evolution is very straight forward to use. The support team are extremely knowledgeable and often sort problems out with you over the phone, straight away. Training is organised when needed and is very comprehensive and informative. The reports and sales data that can be created are fantastic for quickly referencing how we are performing as a small business and for calculating our VAT returns. Clarity are always improving and updating features. They are a family orientated business that cares. The team are all very helpful and friendly."

Time for Diamonds - Mark Burgin

"We feel Clarity & Success is the perfect system for any jeweller."

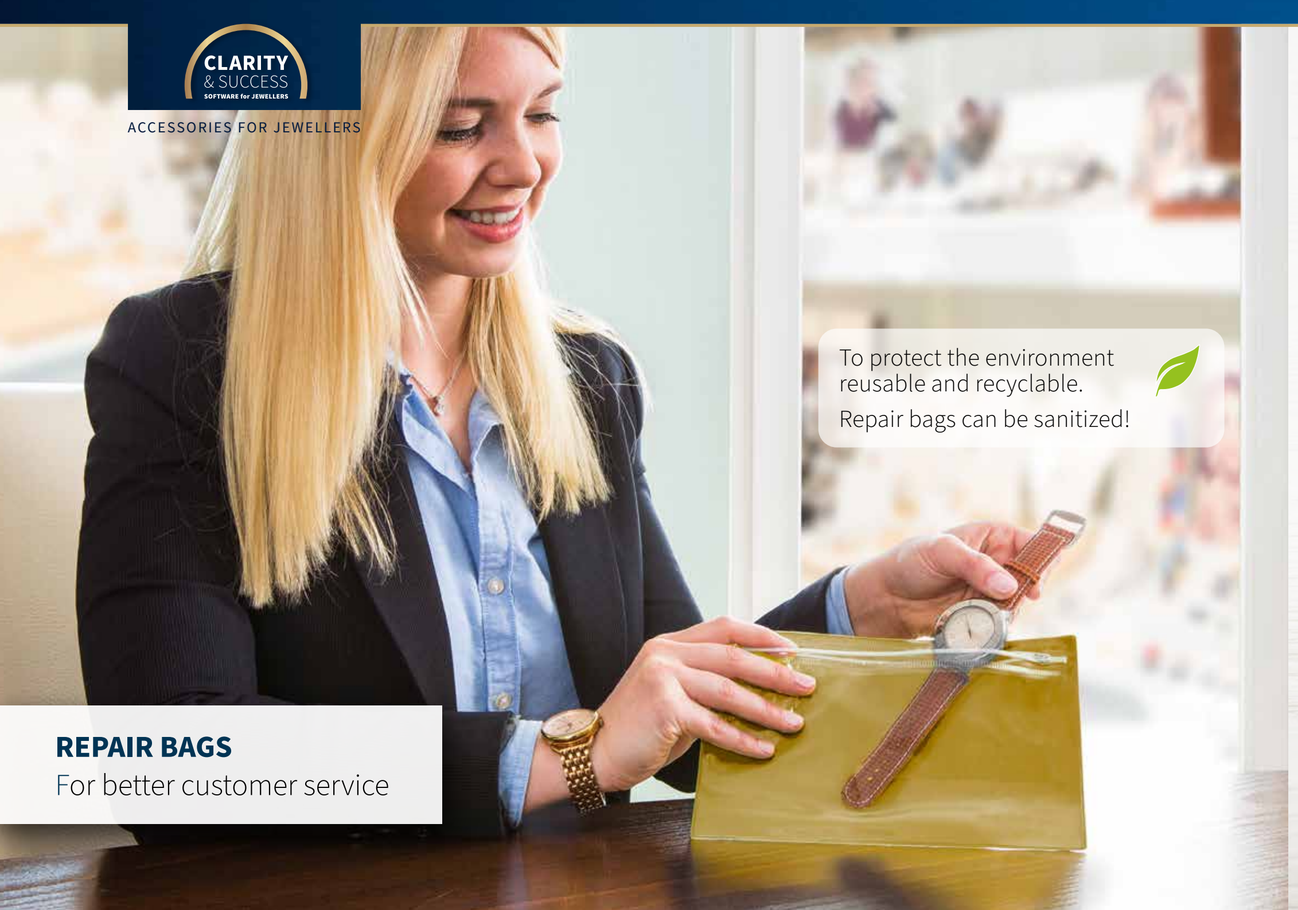
ACCESSORIES FOR JEWELLERS



To protect the environment reusable and recyclable.

Repair bags can be sanitized!

REPAIR BAGS
For better customer service

REPAIR BAGS More order and security for your repairs

With the Clarity & Success repair bags, you can keep track of your repairs easier than ever before. Thanks to years of experience and close collaboration with goldsmiths and manufacturers, the repair bag has been specially adapted to the needs of the Jewellery and watchmaking industry. Through the practical know-how of the industry and Clarity & Success's customer-specific knowledge, the packaging offers several advantages in terms of use and handling.

To ensure safe storage of the Jewellery and watches, the repair bag is made of a durable 200µ PVC material. This not only prevents the repair bags from being damaged too quickly, but also the records and, above all, the customer's Jewellery are protected. It is also advantageous that the repair bags can be used repeatedly and the environment is thus protected.

The back of the repair bag consists of a large compartment in which the Jewellery and watches are kept. This can be closed with a zipper, so that everything is safe in the repair bag. Both small and large products are protected and cannot fall out. Since this also consists of a transparent film, you can immediately see what is in it.

For each repair bag, you receive a pouch filled with silica gel, which protects your repairs from condensation and prevents tarnishing of the Jewellery. Overall, the material of the repair bag has a strong inherent stability. As a result, the packet can also be stored with the repair details showing so you will quickly find any repair you require. Since the zipper can be closed from the bottom to the top, there is no danger of loss when the zipper is not fully closed when standing.

The repair bags are available in five colours, so you can subdivide your repairs thematically, e.g. for Jewellery, watches, estimates etc.

Available colours

- Steel blue
- Black
- Silver
- Gold
- Signal white

Colours may differ. Illustration similar.

All data in view

2 Slots A) 120 x 210mm
B) 130 x 165mm
